

OWA Site - Schemas

Page: **Pop-Up**

This page in particular is not like other pages from any sites we have built. In this case, the site has a pop-up form with three fields:

1. Email Address
2. Gender
3. Birth Date

I would like to create a post method that can be called from OWA's site when pushing the pop-up's "submit" button.

I would like to create a table in the database, which allows this information to be stored and displayed within this page in the dashboard.

The page should display a table with the stored data, and next to each row the possibility to "delete" the row.

Beneath the table, I would like some statistics and graphs that help the client better understand the demography of the people that are filling in the form. For example:

1. Number of people that have filled in the form
2. Age Histogram
3. Gender Distribution
4. Gender X Age Distribution

Make it easy for us to know which is the end-point the front-end has to call.

Page: **Hero**

This page has three elements:

1. Hero Background Image
2. Hero Text
3. Hero Botton

For the "Hero Background Image", the client should be able to load an image. Any previously uploaded picture will be replaced for the new one.

For the "Hero Text", the same situation happens. The client can replace the previously imputed text for a new one.

The “Hero Button” has two elements: the button’s text, and the button’s href. The client can modify both of these.

Page: **Moto Text**

This page is very simple. It is just one text area. Currently, the value is “Practice the art of being well”. The client should be able to modify it.

Page: **Discover OWA**

This page consists of three elements:

1. Page Title
2. Page Description
3. Discover Sections

The “Page Title” is a very basic text area – which the client can modify. Its initial value is “DISCOVER OWA”.

The “Page Description” is also a basic text area – which again, the client can modify.

The “Discover Sections” consists of four cards. Each card is composed of the following elements:

1. Card Title
2. Card Description
3. Card Link - Text
4. Card Link - URL
5. Card Background-Image

The client should be able to modify all the elements within a card. But also, the client should be able to DELETE a card, or CREATE a new one. The project starts with four cards; yet – in the future – the client might decide to change this by deleting or adding cards.

Page: **Therapies**

The “Therapies” Page consists of four sections:

1. Page Title (Initial Value: Therapies)
2. Page Description
3. Therapies
4. Book Button

The “Page Title” and “Page Description” are basically text areas which the client can modify.

The “Therapies” section is a list consisting of individual therapies. Each therapy consists of the following elements:

1. Therapy Name (text)
2. Therapy Description (text)
3. Benefits (list of text; client can add or delete new elements to the list)
4. Therapy Image (upload image; replace previous one)

The “Book Button” is just a button, and the client should be able to modify the “Button Text” and “Button URL”.

Page: Memberships

The “Memberships” Page consists of four sections:

1. Page Title
2. Page Description
3. Memberships
4. Book Button

The “Page Title” and “Page Description” are basically text areas which the client can modify.

The “Memberships” section contains Memberships; these are cards which consist of the following elements:

1. Membership Title (text)
2. Price (text; eg: \$ 5,000 MXN / mes)
3. Description (text)
4. Benefits (list of text; client can add or delete new elements to the list)

The “Book Button” is just a button, and the client should be able to modify the “Button Text” and “Button URL”.

Page: Moto Image

This page is very simple. It should basically allow the client to upload an image, which will be used as a background for the section. If any image is already uploaded, the new upload should replace the previous one.

Page: Events

The “Events” Page resembles a lot the “Discover OWA” Page. It consists of three elements:

1. Page Title
2. Page Description
3. Events

Both “Page Title” and “Page Description” are text areas. The client should be able to input the text that he wants.

The “Events” section consists of – initially – four event cards. Each event card has consists of the following elements:

1. Event Image
2. Date (Format: DD Month Year; eg: 06 Jan 2026)
3. Event Name
4. Organizer
5. Time (eg: 8:00 pm)
6. Price (eg: \$600 MXN)
7. Link Text
8. Link URL

The client should be able to modify all the content within an event card. Additionally, the client should be able to DELETE and CREATE cards. There are initially four cards, but this might change in the future.

Page: Footer

The “Footer” Page consists of two sections:

1. GET IN TOUCH
2. CONNECT

The “GET IN TOUCH” section consists of three elements:

1. Physical Address (Initial Value: Sinaloa 49 Col. Roma Norte Mexico, CDMX. CP. 6700)
2. Contact Email (Initial Value: hello@owawellness.com)
3. Contact Phone (Initial Value: +52 555 505 7158)

The client should be able to modify any of these.

The “CONNECT” section consists of two elements:

1. Instagram
2. Spotify

Each of these is basically a URL for social media. The client should be able to modify the URL.
